

Example Single SonarQube Project issues

If you configure 1 project, you can see all SonarQube issues associated by the author and project.

CONFIGURATION EXAMPLE

SonarQube Issues by Authors

SonarQube Server URL

This is the base URL of your SonarQube installation such as http://yourhost.yourdomain/sonar

Token

This field is optional. If your SonarQube instance is not public, then you will need to setup this field with the security token from a SonarQube user in order to make requests to the server

Authors

This field is optional. If you leave field empty, we use your Jira login and email. List of authors, you can specify 1 or a list of authors (SonarQube login, SonarQube email or SCM accounts) separated by commas. For example: developer@gmail.com, developer, developer@github.com

Resource Key

This is the key of the SonarQube resource where you are going to retrieve the issues. You can get this key from your SonarQube project dashboard or your sonar-project analysis parameters.This field is optional. If you leave field empty, we retrieve all SonarQube issues.

Repository Branch

This field is optional. If you leave field empty, we use main branch
