

System Field Default Values

eWith this premium feature you will be able to a different give default values per project to the next fields:

- Affects Version/s
- Assignee
- Component/s
- Due Date
- Environment
- Fix Version/s
- Labels
- Original Estimate
- Priority
- Security Level
- Summary

Where can I find it?

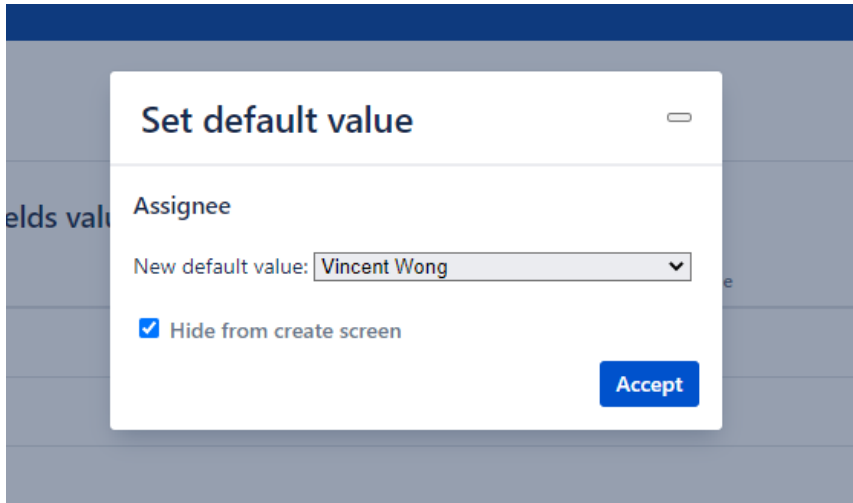

You would be able to find this functionality at project management page. To access it you should click under the Project Setting and then choose System fields default value :

From the **System fields default value** you could see all your system fields default values and you will be able to add, edit or delete them.

How does it work?

By pressing the Edit default value link, a window will popup to allow you to define the field default value. Additionally you will be able to hide the field from the create screen.

A screenshot of a web application interface showing a modal dialog box titled "Set default value". The dialog has a close button in the top right corner. Inside the dialog, the section "Assignee" is visible. Below it, the text "New default value:" is followed by a dropdown menu currently displaying "Vincent Wong". At the bottom left of the dialog, there is a checked checkbox labeled "Hide from create screen". At the bottom right, there is a blue button labeled "Accept". The background of the application is a light blue-grey color with a dark blue header bar.

Once you click in the Accept button your election will be saved, and from now on when any user creates a new issue on the project the issue will be created with this default value.
