# Issues By Author Usage

The plugin configuration is quite simple.

There are four options:

- **SonarQube Server**: this is a dropdown list with the SonarQube servers configured through the plugin settings.
- **Resource Key**: This is the key of the SonarQube resource where you are going to retrieve the Issues. You can get this key from your SonarQube project dashboard or your sonar-project analysis parameters.
  - **Note**:
    - You can setup more than one resource/project key by providing a comma separated list of resource keys. Measures will be aggregated into a unique view of all the projects together. See section linking multiple projects to Confluence.
    - This field is optional. If you leave field empty, we retrieve all SonarQube Issues.
- **Tags :**This is an optional field. You can get the projects through the tags associated with them in SonarQube/SonarCloud. These tags can be obtained from your project page in SonarQube/SonarCloud or from the analysis properties. You can configure more than one tag by specifying a comma separated list of tags. The results will be aggregated in a single view with all the resources together.
- **Authors:** List of authors, you can specify 1 or a list of authors (SonarQube login, SonarQube email or SCM accounts) separated by commas. For example: developer@gmail.com, developer, developer@github.com
  - **Note:** On Confluence Server/DataCenter this field is optional. If you leave field empty, we use your Confluence login and email.
- **Branch:** This optional field is used only if you configure 1 project. If you leave field empty, we use main branch

---

## Edit 'SonarQube Issues by Authors' Macro

Show SonarQube issues by Authors in a Macro

**SonarQube Server**

| Server 1 | ⌄ |

SonarQube server to connect to. You Confluence administrator must setup SonarQube servers through SonarQube Connector settings in Confluence Administration page.

**Resource Key**

This is the key of the SonarQube resource where you are going to retrieve the quality metrics. You can get this key from your SonarQube project dashboard or your sonar-project analysis parameters. You can setup more than one resource/project key by providing a comma separated list of resource keys. Measures will be aggregated
