Cloud - Features

A new custom field type to create fields to search and link multiple issues to the field

A new custom field

Create new fields with the issue picker custom field and let your users pick multiple or single issue to assign them to the fields.

JQL filter to filter issue picker results

You can add a JQL filter to an issue picker to shorten the search results.

Quick search for recently viewed issues

When editing your created fields they will display your recently viewed issues to quickly select them.

Custom Layout

You can view issue key, summary and the current status from field

Create link between Issue Picker

You can configure issue picker to create link between issues using issue picker values

Features

Create new Issue Picker fields

Configure view for Issue Picker fields
