# Enable DEBUG mode of plugin LOG

**In order to get more information about the problems, it is required to enable the Debug mode of the plugin LOG. To do this, the following steps must be followed:**

**Go to Configuration  System  Logging and Profiling   Configure logging level for another package**

**Note:** *If instance is restarted, this configuration is lost and the steps would have to be repeated.*

**Add es.excentia  on "Package name" field, select DEBUG on Logging Level and clic Add button**

**When the problem is solved, remember to disable the LOG from the same configuration page by selecting OFF from the list.**

| es.excentia | DEBUG | TRACE INFO WARN ERROR FATAL OFF |
|---|---|---|
