

# Administration

You can enable/disable rules from project settings page. Just go to the debt configuration section included with the plugin:

The screenshot shows the JIRA Team Spaces Administration page. The top navigation bar includes 'JIRA', 'Dashboards', 'Projects', 'Issues', 'Boards', and a 'Create' button. Below this, the 'Team Spaces' header shows project details: Key: PROO, Lead: admin, Project type: Business, Category: None, and URL: No URL. The left sidebar contains a list of administration options: Summary, Issue types (with sub-items Subtask and Task), Workflows, Screens, Fields, Versions, Components, Users and roles, Permissions, Issue Security, Notifications, HipChat integration, Development tools, Issue collectors, **Debt Configuration** (highlighted with an orange box), and Time Tracking Stats. An orange arrow points from the 'Debt Configuration' link in the sidebar to the 'Debt Configuration' section in the main content area. The 'Debt Configuration' section has a title and a description: 'Here you can setup your rules and debt model for your project. Each rule is designed to detect a JIRA bad practice.' Below this is the 'Rules Configuration' section, which lists 13 rules with checkboxes. Most rules are checked, except for 'Resolved after due date' and 'No assignee'. A 'Save' button is at the bottom right of the rules list.

**Debt Configuration**

Here you can setup your rules and debt model for your project. Each rule is designed to detect a JIRA bad practice.

**Rules Configuration**

- ☐ Resolved after due date  
This rule checks if the issue has been resolved after issue due date
- ☒ No updated last month  
This rule checks if the issue has been updated during the last month
- ☒ No comments  
This rule checks if the issue doesnt have any comment
- ☒ No description  
This rule checks if the issue doesnt have a description
- ☒ Longer than expected  
This rule checks if issue timespent is over estimation
- ☒ Short description  
This rule checks if issue description is too short
- ☒ Short summary  
This rule checks if issue summary is too short
- ☒ No original estimation  
This rule checks if issue is not estimated
- ☐ No assignee  
This rule checks if issue is not assigned
- ☒ Too Long Estimation  
This rule checks if issue estimation is too long
- ☒ Too Much Timespent  
This rule checks if issue is taking to much time

**Save**

Check the rules that you want to enable in your project and just save the configuration. All the debt computation will be updated with this rules.
