

# Usage

After it has been installed the plugin will provide you with 2 different pages:

- One page at project level: to display the 3D view of a single project
- One page at global level: to display the 3D megalopolis view (a custom view with all the projects).

## How to manipulate the 3D city

- Click and drag the mouse horizontally over the city to rotate it horizontally.
- Click and drag the mouse vertically over the city to rotate it vertically.
- Use the mouse-wheel to zoom in or out of the city.
- Use the keyboard cursors to center the city at any place (up, down, left, right).

## Accessing the details of a class

- Click the mouse button on a building to see the name of the underlying class and the values for the size of the building.
- The name of the class you can see is actually a link. Click on it to see the detailed Sonar view of this class.
