

Features

Kanbanize your project automatically!

The kanban board is created automatically using your project workflows, issue types, statuses, ...

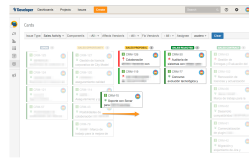

Drag and Drop

Monitor any project visually. Manage issues by simply dragging and dropping them between columns. Like Trello? Yes, exactly the same, but in Jira.

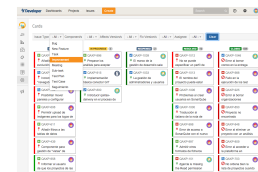

Cards manages status transition of issues by highlighting the possible status for any issue, as shown in the below image

What's more? It's easy to install and has zero configuration hassles.

Filter and get what you need

Search cards (issues) using several commonly used filters like issue types, components, versions and assignees.

Features

1. Quick and simple, no configuration is required. [Install Cards for Jira](#) and a Kanban Board for each project will be created automatically!
2. All the **issues** in a project are displayed in a board **as cards**. Managing the issues has never been this visually attractive!
3. Columns are dynamically created, as the app is aware of workflows and statuses in projects.
4. **Transition issues just by moving them between columns**. Moreover, Cards App will highlight the columns where the issues can be moved. Yeah, it take restrictions into consideration too!
5. Cards is "**agile - made simple**" for ALL TEAMS. Compatible with Jira Core, Jira Software and Jira Service Desk
6. **Interactive filtering** allows to view issues using widely used filters such as issue types, components, version affected/fixed and assignee
7. We keep working on Cards for Jira. Our **roadmap** is full of new & cool features. Do you need something specific? [Reach us](#)
